

CYBER SECURITY

CYBER SECURITY PRO

Built on our record breaking and award winning ESET NOD32 technology, ESET Cyber Security lets you work, play, create and share while we take care of online and offline threats.

No operating system is 100% secure. Macs need protection just like Windows PC's. Our advanced antivirus and antispyware keep your system protected against viruses, worms, Trojans and other threats. Our Cloud-powered scanning speeds up the scanning process without compromising our unprecedented detection rates.

Our anti-phishing module helps steer you clear of websites that might try and steal your usernames, passwords, banking details and other personal information. Cyber Security's small system footprint ensures that you don't compromise power for protection and keeps your hardware running smoother for longer: browse, play and work without slowdowns.

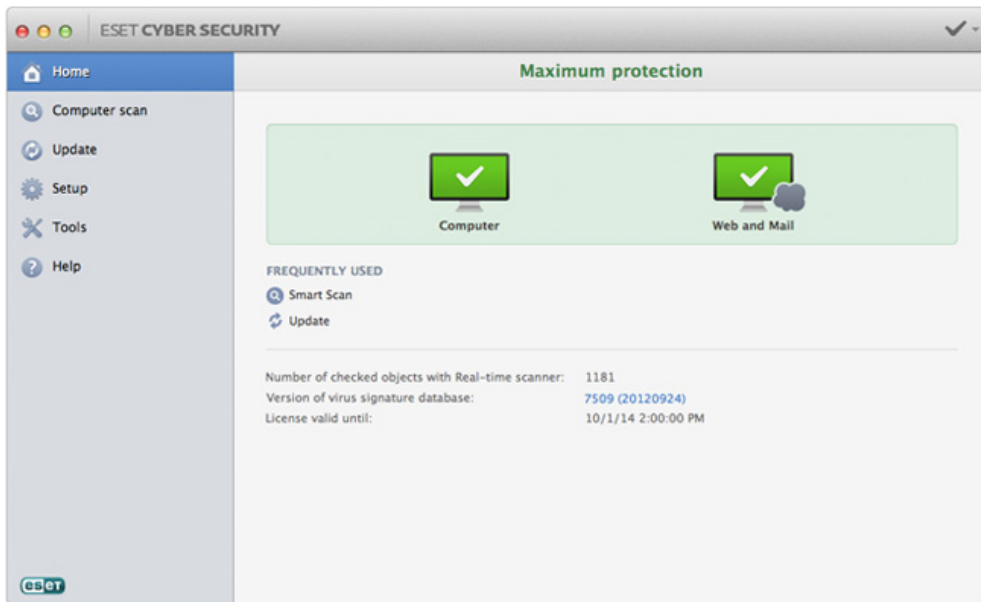

Not all threats are found online and that's why Cyber Security can detect threats on USB flash drives, CDs, DVDs and other removable media, so you can transfer files safely. Install and forget or customise and tweak Cyber Security's setting to suit your own requirements. Our Social Scanner protects you and your friends' Twitter and Facebook profiles from potential harmful links.

The Pro version of Cyber Security adds Parental Controls which can be customised to block groups of websites or specific sites. Cyber Security Pro also features a personal Firewall to protect you if you are using public Wi-Fi on the move.

KEY FEATURES

- **Antivirus and Antispyware** keeps you safe from viruses, Trojans, adware, spyware and other online threats.
- **Anti-phishing** helps you avoid websites that try and take your personal data.
